

Introducing the NEW Index 3 Asbestos

In 2 sizes:

Index3R (Regular) & Index3T (Thin bar)

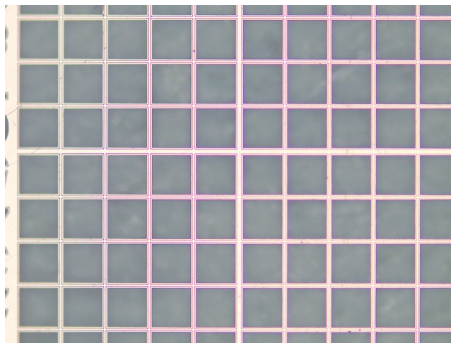

Index3 Asbestos Regular bar 115 µm diameter

Index 3 Asbestos Thin Bar 118 µm diameter

Regular bar grid at junction of thicker center bar

All areas the same across all 100 squares

Thin bar grid at junction of thicker center bar

Benefits:

- open area averaging 115 µm (**0.0132 mm²**) or 118.5 µm (**0.014 mm²**) for those wanting minimum > 115 µm.
- 4% standard deviation
- Reinforced (thicker) centre bars to provide both: **additional orientation without loss of working area**, as well as reinforced **stiffness** allowing for more open area without loss of function.
- Peripheral indexing to keep all squares useable and not in the working space
- Extremely even grid openings across the entire grid, < 0.3 µm variation, **including** those beside thicker center cross.
- “Micron” **μ** orientation mark visible to the naked eye.
- Calibrated version also available
- Priced competitively

As with all EMicron grids:

1. Shiny & dull side for easy “right side” orientation
2. Very straight smooth bars
3. Carefully cleaned and individually inspected before packaging.
4. Friendly prompt customer service.

Straight smooth bars
